Education

Stevens Institute of Technology | Hoboken, New Jersey

September 2023 – May 2025

Master of Science in Computer Science

GPA: 3.7/4.0

Relevant Courses: Web Programming I & II, Agile Methods for Software Development, Enterprise Software Architecture & Design

Fordham University | Bronx, New York

August 2020 – May 2023

Bachelor of Science in Computer Science | Magna Cum Laude

GPA: 3.72/4.0

Awards: Dean's List: Fall 2020, Spring 2022, Fall 2022, Spring 2023

Relevant Courses: Data Structures, Computer Algorithms, Database Systems, Mobile Device Programming, Java Programming

Experience

Simulation Technician

October 2025 – Present

RWJBarnabas Health School of Nursing

- Programmed and operated high-fidelity simulation systems using LLEAP and SimCapture to execute event-driven clinical scenarios, ensuring accurate real-time system behavior for nursing students during their simulations.
- Assisted in configuring and troubleshooting simulation scenarios through SimCapture by coordinating hardware, software, and audiovisual components to ensure smooth execution during these simulation scenarios.

Teaching Assistant | CISC-3595: Operating Systems

January 2023 – December 2023

Fordham University

- Developed a C++-based autograder to evaluate Operating Systems lab submissions, significantly reducing manual grading time by 75%.
- Provided student support through email and validated autograder results by manually reviewing submissions, ensuring grading accuracy and consistency.

Projects

Roommate Roulette | [Source Code](#)

October 2023 – December 2023

- Built a full-stack matchmaking web app using JavaScript, HTML, and CSS that helped 300+ users find compatible roommates through dynamic filters and data-driven algorithms.
- Implemented server-side rendering with Express.js and built RESTful API endpoints to support secure CRUD operations for user and group data in MongoDB.
- Designed a modular Node.js backend for scalable routing and separation of UI and API layers.
- Leveraged Git for version control and collaborated within a team of five, integrating CI/CD pipelines to improve code integration and deployment efficiency.

SideProject | [Source Code](#)

October 2024 – December 2024

- Built a React-based full-stack platform for recruiters to evaluate developer portfolios, integrating GraphQL resolvers and Redis caching to reduce data retrieval latency by 40%.
- Designed and implemented modular, reusable UI components using Next.js and React hooks to support scalable rendering of 25+ profile pages and 50+ project displays.

MindLink | [Source Code](#)

February 2024 – April 2024

- Collaboratively developed a 2D platformer game in Unity featuring a real-time WebSocket interface that mimics EEG brainwave signaling for interactive gameplay control.
- Integrated C# for frontend/backend development and Python for machine learning integration.
- Achieved 69.2% accuracy for left movement and 98.5% for right movement predictions.
- Employed Agile methodologies using Jira to manage sprint tasks, log user stories, and prioritize development throughout the whole project lifecycle.

Skills

Languages: JavaScript | HTML | CSS | SQL | Java | C++ | C# | Python

Frameworks/Databases: MongoDB | Node.js | React.js | Next.js | Redis | GraphQL | PostgreSQL | Tailwind CSS | Express.js

Technologies: Git | GitHub | Visual Studio Code | AWS (EC2) | Kubernetes | Docker | IntelliJ IDEA

Other: Agile Methodologies | CI/CD | SDLC | REST APIs | Microservices | Unity
